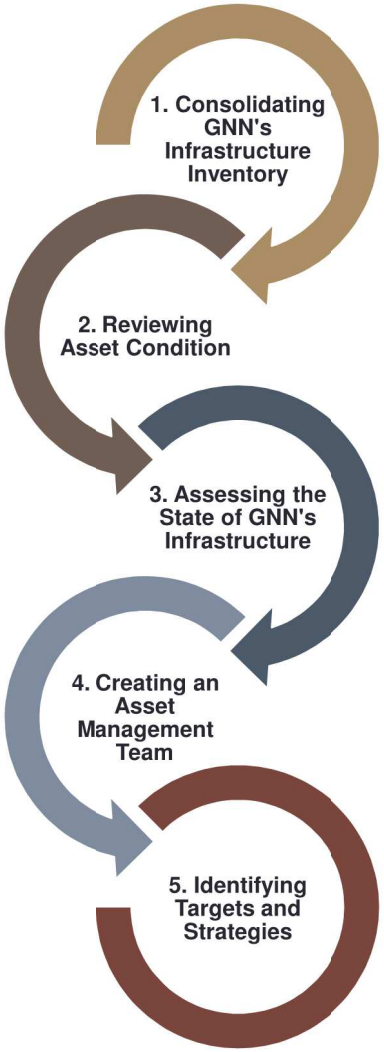
Phase 1 of the Asset Management Program



What assets does GNN have in the Tsulquate community?

What condition are these assets in? What is their remaining life?

What are the assets worth? What work needs to be done? What are the risks? How much will it cost to renew existing assets?

How do you want to manage your assets, considering *present and future* needs of users, and the *services* being provided? Who will be involved in this process?

What are the short term priorities (1 to 5 years)?
What is the longer term plan (25 years)?
How will this work be paid for?
